

## **Sclerotherapy Post Operative Care**

After today's procedure the area that was treated may be a little uncomfortable. Some patients may feel burning, aching, or cramping in the area, this is normal. If needed, you can take over the counter pain reliever to relieve discomfort. Some bruising is also possible.

A pressure dressing will be applied to the area and you will be asked to wear support hose for 72 hours. You may change the bandages when they become wet.

Results may not be noticeable for up to 2 weeks, additional treatments may be needed.
